

**Andrea,  
the technician of TOWSC is happy to  
share his O&M working experience.**

### **Can you tell us about yourself?**

Hi, I am Andrea. I am a European citizen from a small country called Malta. I have always had a passion for engineering, exploration and adventure! I am not the kind of guy who stays still. I always want to move around and enjoy what is out there! Long story short, I had no idea I would be entering the Wind Industry after flying for almost 10 years as a flight attendant with EMIRATES Airlines whilst still keeping up to date with engineering knowledge and practice! It is amazing!

### **What motivates you to become a WTG Technician?**

Well... I was always impressed how these behemoths of Wind Turbine Generators worked and generated so much power by just a bit of wind which really makes a job of its kind stand out! By using my background knowledge in engines, electric and electronics engineering and basic hydraulics and knowing this business could help in lessening the carbon footprints in this world, I would very much like to learn how to apply the engineering skills in a professional manner and still be out and about..... and who knows, maybe I will be able to come up with an idea of my own to contribute!

### **What advice would you give to people who want to become a WTG technician?**

My advice to you people out there who are looking to become a Wind Turbine Technician is simple. Do what you are good at and if it makes you happy, then you are in the right place.
